Using AI?

People often say “using AI” as if they were referring to using a tool, like a stapler. But...

- People know when they are using a stapler.
- Understanding the inner workings of a stapler is not necessary to use it.
- Stapling is monolithic with a consistent meaning in different contexts.

But not all is optimistic

Comparative advantage arguments? Weaker if humans compete for resources with AI (e.g., energy). Or if AI use exacerbates inequality. Or if individuals get displaced.

AI is part of a larger transition from labor to capital expense, from variable costs to fixed costs, leading to significant benefits from scale.

A huge change over the last 500 days is "which jobs".

Pew Research Center

Most Americans haven't used ChatGPT; few think it will have a major impact on their job

The debut of ChatGPT has led some tech experts to declare it part of a "robot revolution." But most Americans haven't used ChatGPT, and only a small share think chatbots will have a major impact on their jobs. Even fewer Americans say chatbots will help work.

Find the AI Approach That Fits the Problem You're Trying to Solve

Westerman, Ransbotham, Farronato

Leaders everywhere are rightly asking about how GenAI can benefit their businesses. However, as impressive as GenAI is, it's only one of many data science techniques.
